

## **Response 9**

The bleached mill fiberline consisted of continuous digester, oxygen delignification process, and bleach process. The kappa was monitored at several points in the process using an automatic sampler/analyizer. The sampler/analyizer is a Metso Automation Kajaani Kappa analyzer. The Kajaani analyzer is industry standard for online kappa analysis. The analyzer uses an optical measurement principle to determine lignin content of the pulp. The analyzer automatically pulls a sample from the process stream, processes the sample, and then scans the sample using a Xenon lamp. The light transmitted is correlated to the amount of lignin present. A correlation curve between the analyzer output and the kappa of the pulp is established using Technical Association of Pulp and Paper Industry (TAPPI) test method T236.

Pursuant to the site's NDPES permit, unbleached pulp kappa to the bleach plant was monitored and reported annually. Copies of the DMR submissions are attached in the pdf file "bleached feed kappa". Daily data is no longer available for the unbleached bleach plant feed kappa. Kappa data for the blow line kappa pre and post conversion is available and included in the pdf file "kappa data."

Kappa Number Annual Attachment

2021

Kappa Factor

1/1/2021 - No unbleached pulp entered bleach plant in 2021

12/31/2021 Bleaching operations were discontinued in 2020

Facility no longer subject to 40 CFR Part 430 Subpart B

Submitted through ePermitting - no signature needed
